Testing a Spatial Analysis Web Application

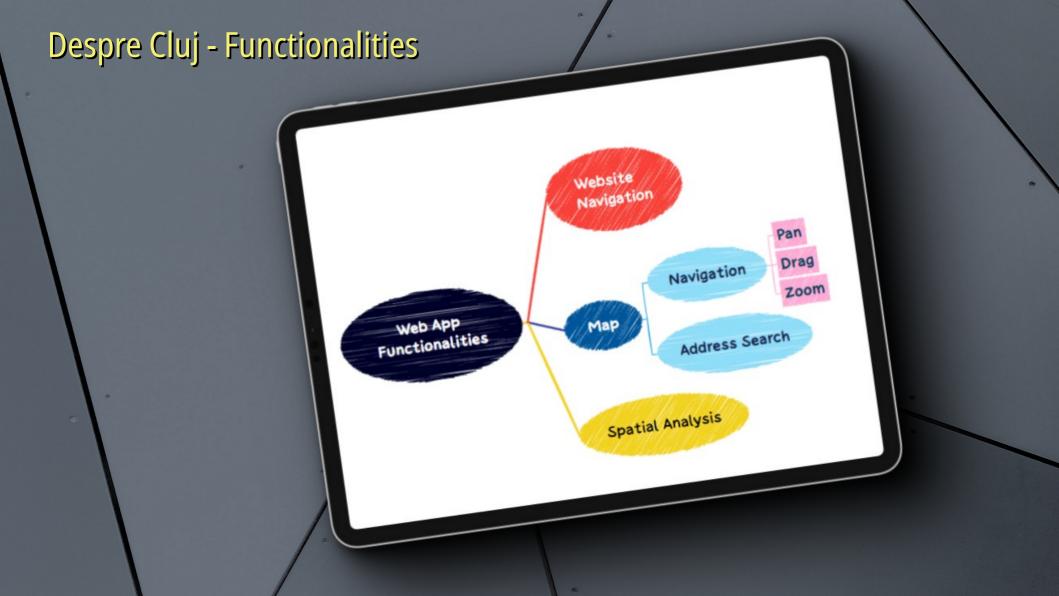

Radu Jucan

Despre Cluj

- its purpose was to bring to light Spatial Analysis, to unveil its potential and benefits
- users can navigate a map, identify a location and start the Analysis
- Spatial Analysis produces a report detailing various aspects of the location, including population, housing, area features, transportation, education, retail, real estate pricing, urban planning considerations, a.s.o.

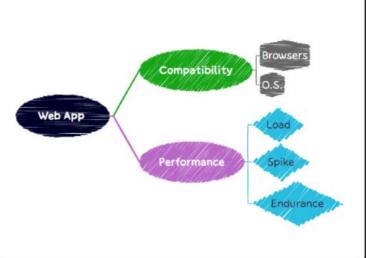

Testing Despre Cluj

← Functional Testing (mainly Smoke, Exploratory)

Non Functional Testing ⇒ (manual, automation testing)

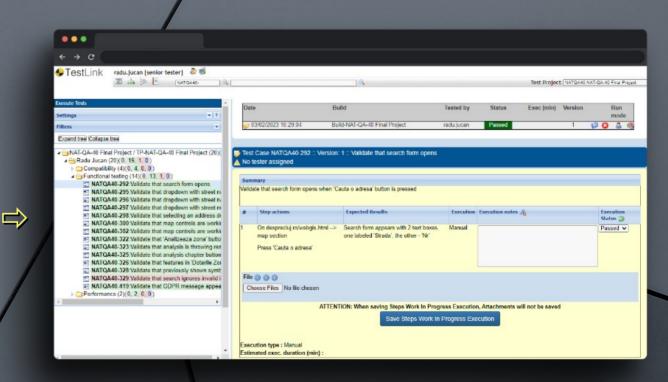

Functional Testing

14 Test cases - documented in TestLink

14 Executed

13 Passed

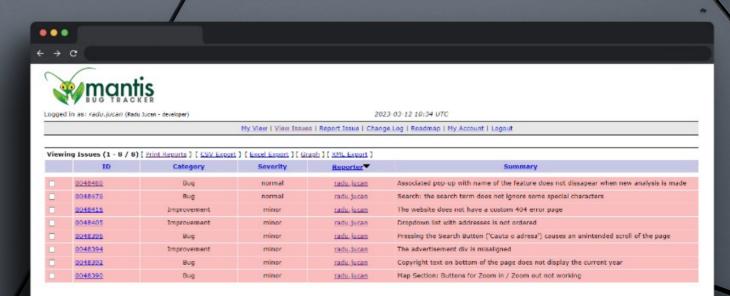

1 Faile

Bugs / Improvements

8 issues identified – documented in Mantis Bug Tracker

2 bugs – normal severity3 bugs – minor severity3 improvements

1. Compatibility Testing (Browser / OS)

2. Performance Testing = using Apache JMeter

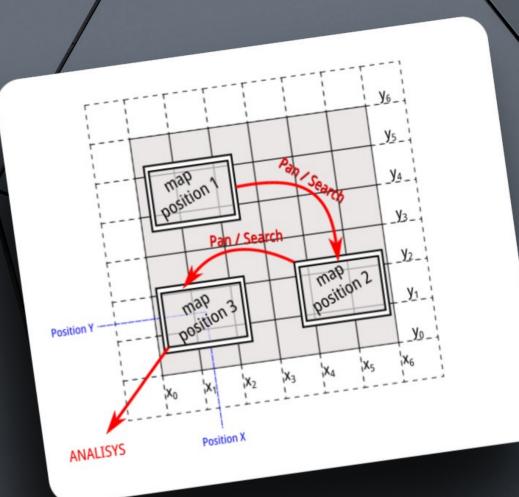

Challenges in developing an effective Test Plan in JMeter

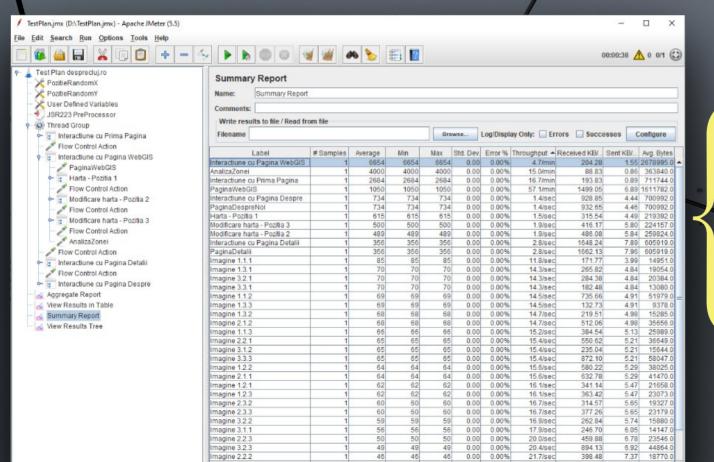

1. Identifying all HTTP Requests

!!! AJAX - "allows web pages to be updated asynchronously by exchanging data with a web server behind the scenes" !!!

2. Creating a realistic simulation of user's interaction with the web application

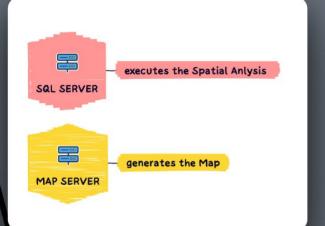

With an effective Test Plan in JMeter

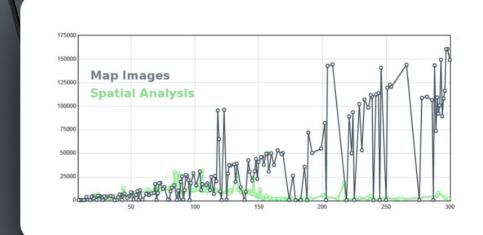

- Load Testing
- Spike Testing
- Soak / Endurance Testing
- Stress Testing
- ...even Recovery Testing

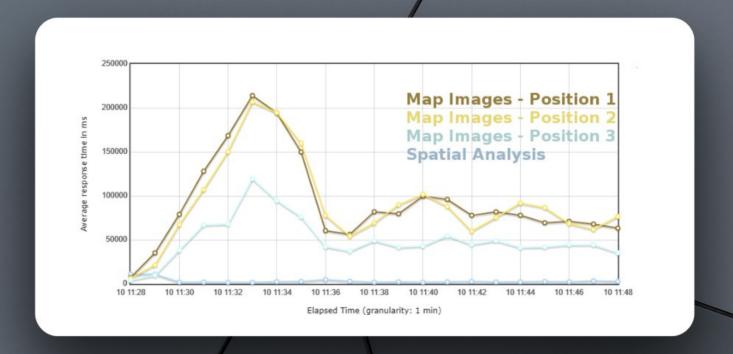

Some Interesting Results

Although the SQL Server responds more slowly than the Map Server, it doesn't seem to be affected by the rising number of users in same manner that the Map Server is (Map Server is the first to crash)

Some Interesting Results (part 2)

During the early stages of the Endurance Test, the server's response time increases dramatically. However, in a short period - it returns to acceptable levels and remains stable thereafter.

Conclusion

The web application was tested with both functional and non-functional tests.

Using Exploratory, Smoke, Negative testing techniques – Test Cases for the main functionalities of the app were created. Some bugs were identified in the testing process and soon they will be fixed.

The non-functional tests were particularly insightful, showing how the website performs under different conditions and with varying user loads.
